

# South West Company Invention Assists UK Water Shortage.

---

## **“ECOSAVE” SAVES WATER IN WORST DROUGHT FOR 100 YEARS**

Ecosave Systems Ltd who are based in Torbay and manufacture innovative water conservation products, are assisting the nationwide water shortage crisis by inventing and bringing to the market a simple yet very effective range of low cost water waste alarm devices to save water.

The ECOSAVE is an acoustic device which “listens” for extended periods of water flow resulting from taps left running or hidden water leaks and if such a leak is identified it sounds a cautionary warning alarm thus heightening water use awareness and reducing water waste, Its worth noting that if a hose or sprinkler system is left running accidentally for just 1 hour longer than required it can waste over 400 gallons of water!

Unfortunately this year is set to repeat the severe droughts of 1934 and 1976 where water rationing and stand pipes, became common in our towns and cities. To further add to this misery those companies who rely on water for their seasonal business activities may have to close either temporarily or permanently as the result of lost business, and this would result in irreparable damage and decline to the already fragile local industry and community.

## **ECOSAVE & SOUTH WEST WATER OFFERS LOW COST SOLUTION TO SAVE WATER**

South West Water and Ecosave Systems Ltd are promoting the “ECOSAVE” as one such solution that can make a difference and reduce water waste. SWW are advertising the water conserving device within

their normal billing runs to their customers, and the response has been encouraging. ECOSAVE are however not wasting time as they are already working on an upgraded model for those water users who have more demanding applications. ECOSAVE also manufacture pro-active water leak alarm systems which automatically shut off the water supply in the event of a water leak or water waste.

## **AN “ECOSAVE” FITTED TO A “RISING MAIN” IN MINUTES WITHOUT TOOLS OR ANY SKILLS**

## **FREE WATER SAVING ADVICE FROM ECOSAVE**

ECOSAVE is clearly focused on developing ways to save water and associated energy, Its Managing Director Mr. John Ellacott is very proud of its achievements to date and is always willing to give water conservation advice freely to anyone who has a particular need or problem during office hours on 01803 521415.

It probably is a testament to the skills of Ecosave in how quickly they have been able to predict and respond to the current market need for such water saving devices. Nearly every day we see news articles over water shortages now making front page news in the tabloids and broadsheets, and perhaps this is just a sign of things to come.

## **CHANGING CLIMATES REQUIRE EVERY HOME OWNER TO EMBRACE WATER & ENERGY CONSERVATION NOW.... WHILE WE STILL HAVE THE CHOICE**

The general public has been exposed over the last 3 years to increasing media reports about climate change and unusually and sometimes extreme weather conditions which can affect our lifestyles and sometimes life itself. We all have a responsibility to conserve our most valuable resources for the sake of future generations and wildlife. Sustainability of drinking water is fast becoming a real problem, and it is up to each of us individually to make those changes, and not leave it until its to late or worse still consider its not our problem.
